Notes regarding Table 1:

1) Deliverables shall meet all of "Standards of ban" specified in the above table.

- In terms of "Banned Substances", methodology of how to calculate concentration shall follow below:
  - In this article, the denominator in calculations of the concentration shall be the mass of the "Material" or the total mass of the Deliverables. You can decide which mass to choose complying with the "Standards of ban" in Table 1 in individual substances.

- In the case of complex substances or materials, the following will be the "Material".
  - Chemical compounds, polymer alloys, metal alloys
    - In the case that Deliverables are raw material such as paint, adhesive, ink, paste, polymer resin, glass powder, ceramic powder, each finally formed product by means of expected normal usage.

Examples: - Dried and hardened material for paints or adhesives

- Molded article for polymer resins
  - Hardened material for glass or ceramic powder
- Single layer of paint, printing, or plating. Or, in the case of multi layers, each single layer shall be defined as the "Material".
- > In the case of packaging material, corrugated board (base material), adhesive, tape, ink, etc.
- The numerator in calculations of the concentration shall be mass of the applicable chemical substance. In the case of metal alloy, metal element in the metal alloy will be the numerator.
- 2) This applies to cases that azo colorants and azo dyes are used for leather products, textile products or their parts that are possible to contact human skins directly for a long time **AND** that form certain aromatic amines listed in Table 1a as a result of decomposition of azo group.
- Four (4) substances in packaging materials: Cadmium, Lead, Mercury and each compound and Chromium VI Compounds
- 4) Class I specified chemical substances on Japanese Chemical Substances Control Law (CSCL)

- Reportable Substance(s) shall be taken hold on the presence or absence in Deliverables, and if Deliverables meet "Conditions of Deliverables to be reportable" defined in the above table, its total mass, purpose of use, and application area, etc., shall be reported to Fujitsu Group.
- 2) In terms of "Reportable Substances", methodology of how to calculate concentration shall follow below:
  - Denominator on calculating concentration is mass of Deliverables.
  - Numerator is mass of the applicable chemical substance.
- 3) The substances fulfill the following additional conditions:
  - Applied only to them when they are used for "Exempted Application" of "lead compounds" defined in Table 1e.
  - Other than those above, they shall comply with the "Standards of ban" as "Lead compounds" defined in Table 1.

Notes regarding Table 3:

Contents of management
 In the case that Deliverables meet "Conditions of Deliverables to be controlled" defined in
 the above table, with respect to "Control Substance", its total mass, purpose of use, and
 application area, etc., shall be managed and recorded.

- 2) In terms of "Control Substances", methodology of how to calculate concentration shall follow below:
  - In this article, the denominator in calculations of the concentration shall be the mass of the "Material" or the total mass of the Deliverables. You can decide which mass to choose complying with the " Control Substances " in Table 3 in individual substances,
  - In the case of complex substances or materials, the following will be the "Material".
     Chemical compound, polymer alloy, metal alloy
    - In the case that Deliverables are raw material such as paint, adhesive, ink, paste, polymer resin, glass powder, ceramic powder, each finally formed product by means of expected normal usage.

Examples: - Dried and hardened material for paints or adhesives

- Molded article for polymer resins
- Hardened material for glass or ceramic powder
- Single layer of paint, printing, or plating. Or, in the case of multi layers, each single layer shall be defined as the "Material".
- In the case of packaging material, corrugated board (base material), adhesive, tape, ink, etc.
- The numerator in calculations of the concentration shall be mass of the applicable chemical substance. In the case of metal alloy, metal element in the metal alloy will be the numerator.
- 3) Carcinogenic (Carc.), mutagenic (Muta.) or toxic substances for reproduction (Repr.) (CMRs) are substances meeting the criteria for classification as

Carc. 1A/1B, Muta. 1B, Repr. 1A/1B, 1A/1B and Carc. Cat. 1,2, Muta. Cat. 1,2, Repr. Cat. 1,2 in accordance with ANNEX VI Table 3.1, Table 3.2 in REGULATION (EC) No 1272/2008 and
